BE05 SITZ
BENCH
DESIGN: JÖRG SCHELLMANN, 2013

The Sitz bench comprises a diagonal that bisects the space on the bench's underside. The Sitz bench features a frame mortised with visible solid wood dowel construction. Sitz bench features a gentle inward curve from its sides that creates a subtle concave surface for the horizontal seating expanse providing an unexpected level of comfort for the sitter. The Platz table has a similar aesthetic that complements the Sitz bench.
